Martin Liddle  
Plant Engineer

**Re: Intellect UK Ltd**

Since 2004, Intellect UK Ltd have undertaken a variety of projects at Corus, Redcar Coke Ovens (RCO) plant, an industrial metallurgical coke making and by-products facility based in Redcar, Teesside.

Recent projects include: -

- Electrical aspects relating to the construction and onsite commissioning of a new coke side machine
- Electrical aspects relating to the construction and onsite commissioning of a new wharf plough
- Onsite, electrical refurbishment of 415V motor control cubicles (MCC)

Intellect UK Ltd have successfully tendered for these projects on a competitive basis and their work has been to an excellent standard. Intellect UK Ltd management have a professional approach, have completed all relevant paperwork to a high standard and always respond well to any items which are raised, before during and following a project.

Intellect UK Ltd have an excellent safety record on site and have not recorded an accident on any of the projects on which they have been involved. This is in no small part due to Intellect UK Ltd management and supervision undertaking regular safety audits highlighting potential issues before incidents have occurred.

The standard of work, which is delivered by Intellect UK Ltd personnel, is to an excellent standard. The company have excellent workshop facilities for offsite build and have provided facilities for extended factory acceptance testing to Corus personnel when requested.

I would have no hesitation in recommending Intellect UK Ltd for all aspects of low voltage electrical work.
