To Whom It May Concern:

My relationship with Intellect is as a Company Project Acceptance Engineer working for Northumbrian Water Ltd, responsible for Amp 4 Capital Maintenance projects at Bran Sands. Intellect has had a major role in electrical and instrumentation installation work at Bran Sands.

Intellect has provided a team of Electricians and Technicians to the Bran Sands projects for the last three years designing supplying and installing electrical equipment of all types and manufacture. All personnel who attended site were of the highest competence and followed all NWL permit procedures and site rules to the letter without any compromise at all times thus enhancing NWL's reputation on this site.

As an Electrical Engineering company Intellect has proved to be very reliable and competitive in this field, providing excellent services throughout, therefore I would recommend Intellect to provide services on any of NWL sites without hesitation and confidence.

As a Northumbrian Water acceptance engineer I would be available to provide further information should it be required and possibly examples of installation work provided by Intellect on Bran Sands site, I can be contacted by telephone on 07966879303 or by E-Mail at steve.mudd@nwl.co.uk .

Sincerely
Steve Mudd
